

New Project - Code Composer Studio

Friday, October 6, 2023 2:21 PM

Create New Project

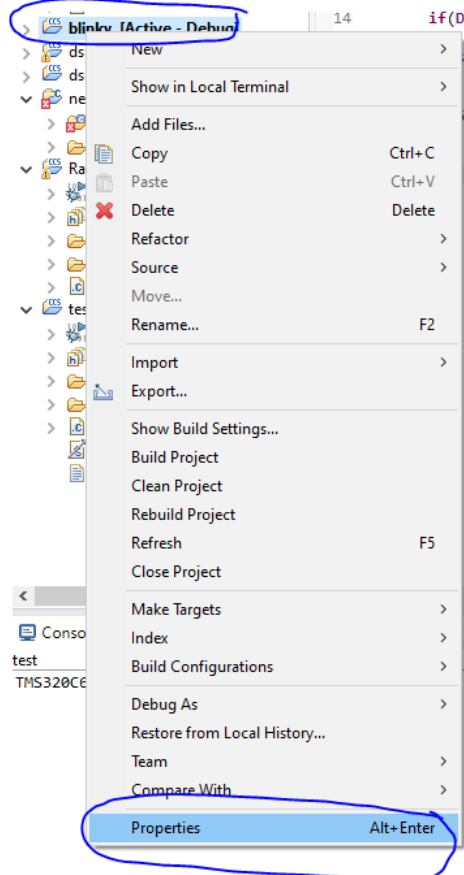

Project with the given name appears on the Project Explorer window and a new main.c file opens up.

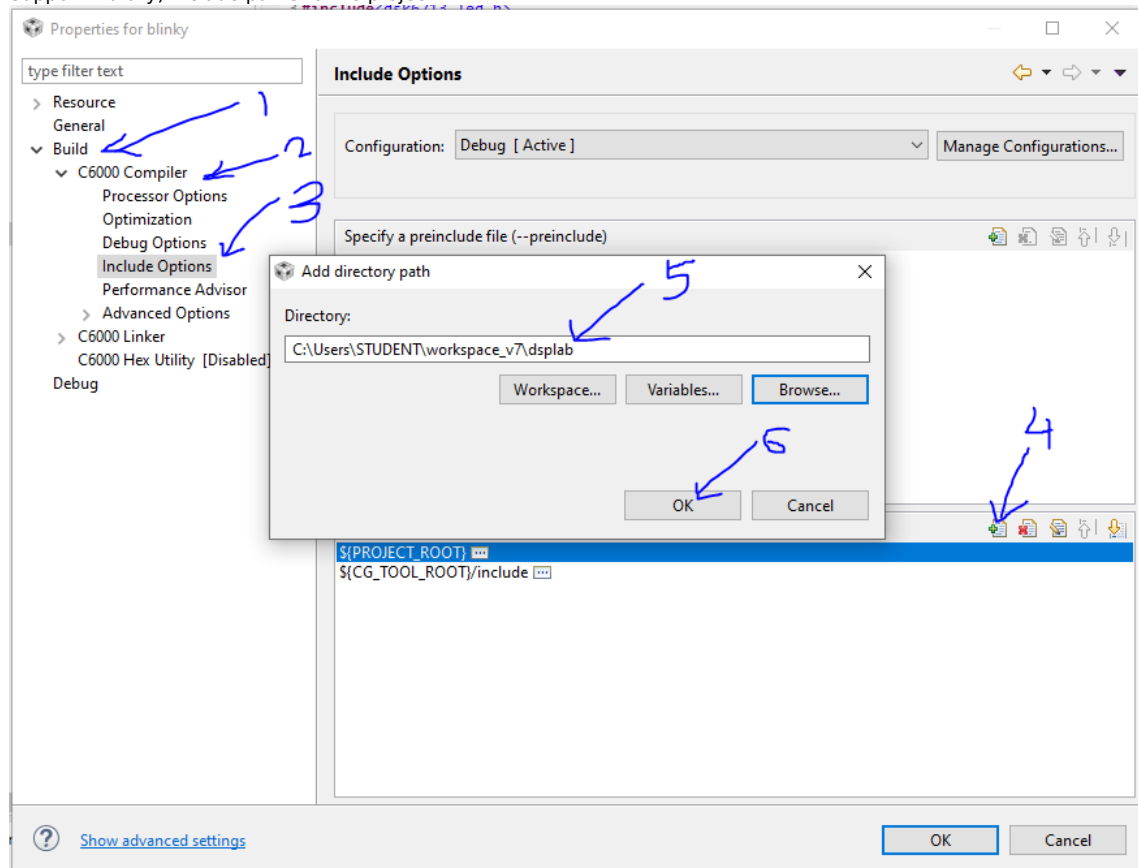

Configuring the project

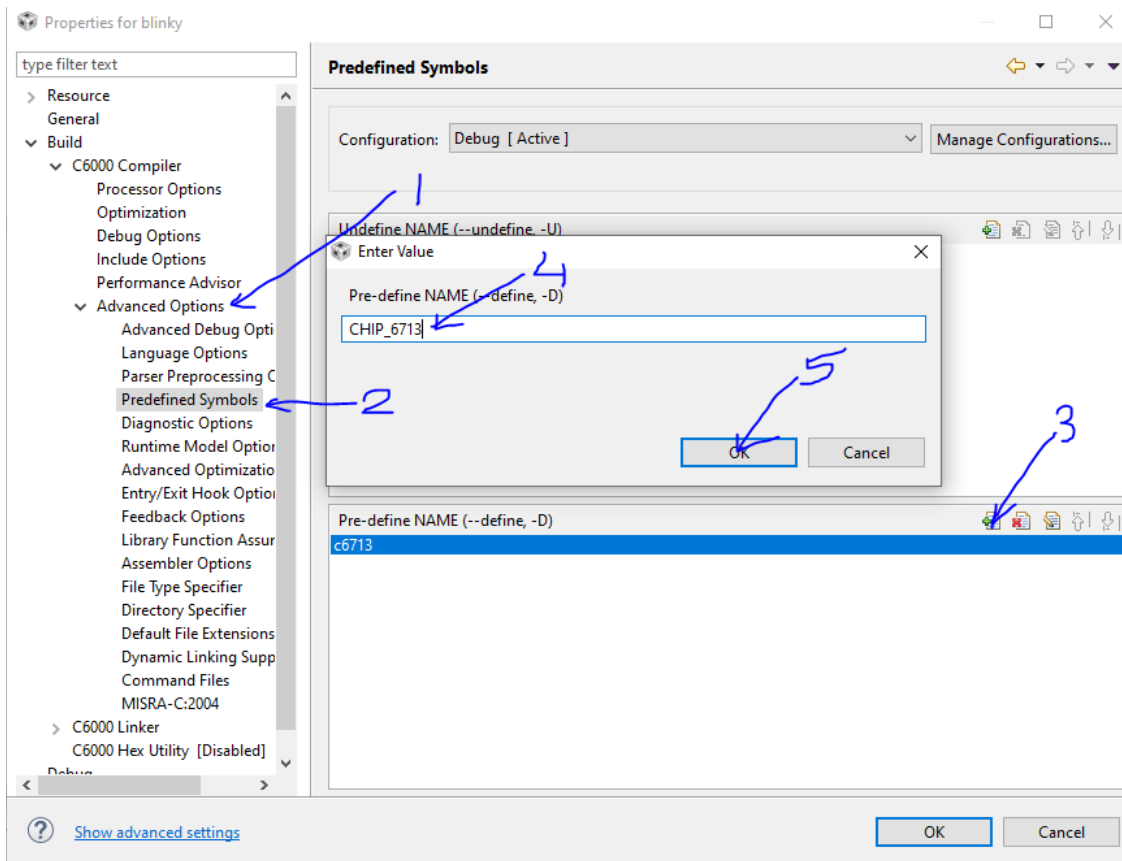

Right click project name on project explorer window and select properties

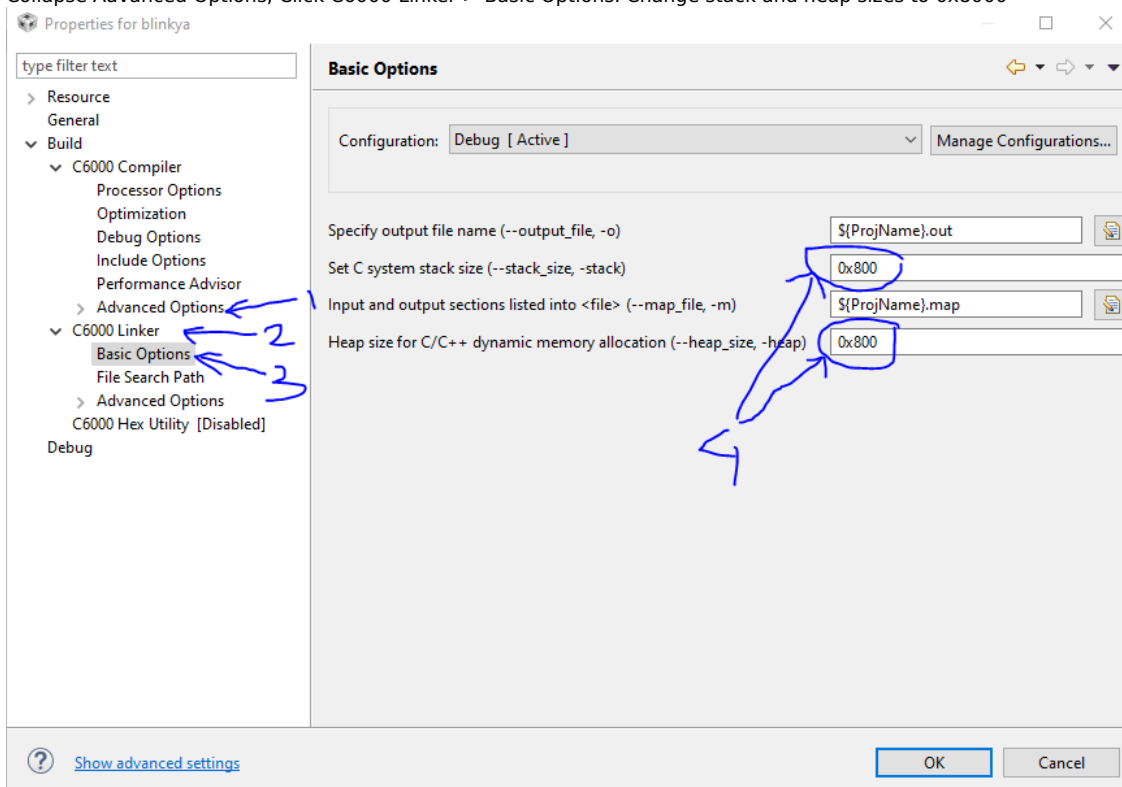

Expand Build > C6000 Compiler > and click Include Options and add the Board Support Library (BSL) and CSL (Chip Support Library) include paths to the project

Then Expand Advanced Options > click Predefined Symbols

Collapse Advanced Options, Click C6000 Linker > Basic Options. Change stack and heap sizes to 0x8000

Collapse that and, click C6000 Linker > File Search Path; and add the following path and libraries.
